PROFESSIONAL STATEMENT

I am a Senior Software Engineer with 3+ years of hands-on experience in designing, developing, and supporting **acquirer & issuer** payment switch systems for **fintech platforms.** My core expertise is in **Golang**-based payment switch development, with additional experience in Node.js and Java (Spring Boot) backend services, **ISO 8583** and ISO 20022 messaging, and gRPC-based inter-service communication. I have worked extensively on real-time transaction processing across **Visa, Mastercard, AMEX, etc.** in multiple countries building secure, low-latency, and compliant systems using event-driven architectures with **Apache Kafka and Docker**-based cloud-native deployments on AWS and Azure**.** Currently, I am **leading a team of 7 developers**, providing technical guidance, code reviews, task planning, and ensuring delivery quality, scope alignment, and timelines.

TECHNICAL SKILLS SUMMARY

- **Programming Languages & Frameworks**
  - Golang (Go 1.25.1): Fiber, Gin, Gorilla Mux
  - Java (JDK 17): Spring Boot 2.7.x
  - Node.js: Express.js
- **Payment Systems & Financial Messaging**
  - ISO 8583, ISO 20022
  - Issuer & Acquirer Processing
  - Real-Time Clearing & Settlement
- **Card Networks & Schemes**
  - Visa, Mastercard, RuPay, AEPS,American Express (AMEX), JAYWAN, CBO (Central Bank of Oman)
- **Databases & Storage**
  - NoSQL: MongoDB, DynamoDB
  - RDBMS: Oracle, MySQL, MSSQL
  - Cache / Embedded DB: Redis, BadgerDB, SQLite
- **Messaging, Streaming & Observability**
  - Apache Kafka, RabbitMQ, gRPC, Prometheus, Grafana
- **Cloud & DevOps**
  - AWS (EC2, ECS, Lambda), Microsoft Azure, Docker, Kubernates,CI/CD Pipelines
- **Development & Collaboration Tools**
  - Git, GitHub, Bitbucket
  - VS Code, Eclipse, Spring Tool Suite (STS), Docker Desktop, Redis Insight
  - MySQL Workbench, SSMS

PROFESSIONAL EXPERIENCE

CredoPay Technology Services Pvt Ltd, Chennai **(** June 2025 – Present)

➢ **Senior Software Engineer** **Duration: 10 Months**

- **Project: Bank Nizwa (Oman) – Acquirer Switch**
  - Developed and supported a **production-grade acquirer payment switch** for **Visa, Mastercard, and CBO (Central Bank of Oman)** networks by implementing **dynamic transaction routing** to card based on **BIN range** analysis, enabling correct scheme selection and fail-safe routing.

- Integrated **Visa SMS (Single Message System)** for real-time authorization processing and response handling and implemented **real-time clearing and settlement flows (RTS) for Mastercard**, ensuring timely posting and reconciliation of transactions.
- Led **production deployments** and build rollouts, ensuring minimal downtime and transaction stability to handle **~50 transactions per second (TPS)** with consistent performance and SLA compliance.
- **Tech Stack:** Golang, NodeJs, Spring Boot , MongoDB, Redis, MYSQL, Kafka , ISO 8583, Azure.

- **Project: City Union Bank (India) – Acquirer Switch**

  - Designed and enhanced **live acquirer switch systems** for **Visa, Mastercard, RuPay, and AEPS** by implementing **XML-based message handling for AEPS** and **ISO 8583 message parsing** & **formatting** across other channels.
  - Worked on **mATM, POS, and PG (Payment Gateway)** transaction flows, supporting a combined volume of **~70,000 transactions per day**.
  - Improved payment switch performance using Go pprof profiling and **gRPC**-based inter-service communication to reduce latency and enhance stability.
  - Integrated **Apache Kafka** for real-time transaction events, retries, reconciliation, and audit trails.
  - **Tech Stack:** Golang, NodeJs, Spring Boot, MongoDB, Redis, MYSQL, Kafka, Grpc, ISO 8583, Azure.

- **Project: VaultsPay (Dubai) - Issuer-Side Transaction Processing**

  - Integrated AWS Cloud HSM for secure cryptographic operations (PAN, PIN, CVV, MDK/BDK).
  - Working on Issuer switch system for Visa by enabling **ISO 8583 ↔ ISO 20022 interoperability** for seamless downstream system integration.
  - Optimized issuer data access using **DynamoDB**, improving transaction performance and scalability.
  - **Tech Stack:** Golang, DynamoDB, AWS, Kafka, ISO 8583, **ISO 20022.**

- **Project: AI/ML-Based Fraud Detection System - In House**

  - Built an **AI/ML-driven fraud detection system** using **unsupervised learning (Isolation Forest)** for real-time anomaly detection across **all** payment channels by generating **normalized fraud risk scores (100–1000)** with configurable thresholds for operational decisioning.
  - Designed and deployed a **FastAPI-based risk scoring service**, loading **trained ML models (data preprocessing, feature engineering, scaling, and dimensionality reduction), scalers, and feature metadata (.pkl)** for low-latency inference and consistent fraud scoring.
  - **Tech Stack:** Python (FastAPI, Django), PySpark, Scikit-learn, NumPy, Pandas, Joblib.

KriyaTec IT Systems Pvt. Ltd, Chennai **(** December 2022 – May 2025)

➢ **Software Engineer** **Duration: 1.5 Years**

- **Project: VaultsPay (Dubai) – Acquirer Switch & Payment Switch Product Development**

  - Designed and implemented a high-performance payment switch in Golang, improving transaction throughput by 30% and reducing processing time by **40%** and optimized concurrency using **Goroutine**s and channels.
  - Managed payment records across MongoDB and RDBMS using **GORM**, ensuring 90% data integrity.
  - Designed and implemented a lightweight **ISO 8583 message formatte**r framework as an alternative to JPOS, enabling faster parsing, validation, and message construction, achieving up to 5× performance improvement over traditional solutions.
  - Integrated **Apache Kafka** to supercharge real-time event processing, boosting throughput by 30% and automating message queuing for high-velocity scaling.
  - Ensured compliance with **Visa/Mastercard/AMEX** security guidelines by implementing secure message transmission and encryption protocols such as AES Encryption (CBC Mode).
  - Contributed to a **Java (Spring Boot) cryptographic module interfacing with HSMs** to decrypt terminal-level encrypted data (PIN blocks, sensitive fields) and securely forward clear transaction data to upstream payment networks.
  - Deployed on Azure CI/CD Pipelines with cross-platform solutions on **Red Hat Ubuntu.**

- Established production monitoring using **Prometheus and Grafana** for transaction and system metrics, and leveraged **Docker** for scalable, environment-agnostic deployments.
- **Tech Stack:** Golang, MongoDB, Prometheus, Grafana Redis, RDBMS, Kafka, Docker, JAVA, ISO 8583, AWS, Azure.

➢ **Junior Software Engineer** **Duration: 1 Year**

- **Project: The Professional Courier (Tamil Nadu, India) –Backend Administrative Service**

  - Developed **high-concurrency REST API** in **Go** (Gorilla Mux), improving response time by **25%**
  - Automated **email/SMS notifications** and elevated **data validation** with **Go-playground/Validator.**
  - Tuned a **data-driven backend** in **Node.js (Express)**, performing optimized **CRUD operations** on **MongoDB** reducing query processing time by **15%**.
  - Deployed and managed scalable microservices architecture on AWS, leveraging **EC2** for compute scaling, ECS for container orchestration, and Lambda to reduce backend processing time by 25%.
  - **Tech Stack:** Golang, NodeJs, MongoDB, AWS, AES/3DES Encryption, **BitBucket.**

EDUCATION

Anna University
Panimalar Engineering College, Chennai 2016 - 2020
Bachelor of Engineering, Computer Science and Engineering ***CGPA (8.43 / 10)***

KEY PROJECTS & SYSTEM DESIGN

Sentinel Switch — Distributed Payment & Fraud Detection System

- Designed a high-throughput, event-driven payment transaction using Golang, Kafka, and gRPC with real-time fraud detection and parallel processing architecture.
- Implemented scalable microservices with Prometheus/Grafana monitoring and Docker containerization, optimized for low-latency and fault-tolerant processing

GRPC Image Lamda Processer

- A Go-based microservice project that uses gRPC for client-server communication and AWS Lambda for serverless image processing, integrated with S3 storage which allows users to send image processing requests (like resize or format conversion) via gRPC.
- The backend offloads the heavy lifting to Lambda, which processes the image, stores the result in S3, and returns the processed image's public URL.

RESTful API with JWT Authentication & in File upload to AWS S3 in Spring Boot

- Developed a RESTful API with JWT-based authentication for user access control.
- Created a collection of APIs to perform CRUD operation on an input file.

Secure Environment Loader

- Streamlined a **Go utility** for securely loading environment variables from an encrypted database at runtime using **AES encryption**.
- Designed for **microservices** and **cloud applications** to securely manage environment configurations without exposing secrets.

CERTIFICATIONS & COURSES

- **HackerRank Intermediate Certificate in Golang** – Hacker Rank (2024).
- **AWS Certified Developer Course** – Udemy (2025).
